The 2019 Rubbish Report is a snapshot of rubbish removed by Clean Up Australia volunteers.

Nationally, the Report is based on the count of 445,251 rubbish items from 1,002 surveyed locations [420,265 items from 895 locations in 2018].

## NOTABLE CHANGES FROM 2018

- Miscellaneous items increased by 9%, metals by 3% and polystyrene by 1%
- Plastics decreased by 8%, glass by 3%, paper and wood by 1%
- Rubber remained consistent

## RUBBISH TYPE BY LOCATION

■ Miscellaneous ■ Wood ■ Metals ■ Paper ■ Rubber ■ Glass ■ Polystyrene ■ Plastic

- Plastics are the most common item reported across all locations
- 83% of reported plastics were found in our waterways [rivers + beach/coastal areas + dive sites]
- Schools reported an increased percentage of plastics [up by 21% from 2018] – primarily reflective of food packaging
- Miscellaneous items [prime individual items of which is cigarette butts] are mostly reported in beach and coastal areas, followed by along roadsides and riverbanks
- Parks, as well as attracting plastics, are also where a lot of metal items are found – the percentage in 2019 was 8% higher than last year. Most common metal items are beverage containers

- Glass [most notably beverage containers] was common along roadsides, in bushland, shops and malls and at the dive site. Bottles not included in a container deposit/refund scheme are now the most likely culprits here – although volunteers are still reporting eligible containers as they hunt them for refunds.

## NOTABLE CHANGES FROM 2018

- The largest increase in average counts was recorded in Shops/Malls [up by 324 items]
- Other increases were noted in Parks [up by 47], Beach/Coastal areas [up by 42], Roadways [up by 34]
- Outdoor Transport areas reported the largest decrease in average counts with 900 less than 2018
- Average number per site count decreases were also reported at Other [generally mixed] sites which reduced by 440 in 2019, in School Grounds [down by 180] and Bushland [down by 4]
- While Dive site average counts dramatically reduced by 1535 items, this is not considered to be significant given that only one site was surveyed in 2019 [compared to 4 in 2018].
